ABOUT WEBINAR
 Blockchain is a shared, immutable ledger for recording transactions, tracking assets, and building trust. Rather than keeping a record of all transactions in a central location, blockchain utilizes a distributed ledger. For a given activity, a copy of the full ledger with all transactions is kept on each node in a distributing network. The blockchain method provides many benefits over centralized forms of record-keeping, including transparency of data and no single point of failure. Although cryptocurrencies are currently a primary driver for blockchain discussions, it makes sense that they would fall to the bottom of the list for potential corporate applications and let us discuss more to explore where all we can apply this emerging technology. The webinar will provide a general introduction on Blockchain Technology and its Opportunities

What is a Blockchain

- ❖ Blockchain is a shared, distributed ledger that facilitates the process of recording transactions and tracking assets in a business network.
- ❖ An asset can be tangible — a house, a car, cash, land — or intangible, like intellectual property, such as patents, copyrights, or branding.
- ❖ Virtually, anything of value, can be tracked and traded on a blockchain network, reducing risk and cutting costs for all involved.
- ❖ The Term 'Block' is nothing but a bunch of transactions that have been added to the Blockchain.
